

Helping grow renewable energy solutions with Island Green Power

Island Green Power specialises in the development of utility-scale solar farms and battery energy storage projects, overseeing the entire development process from start to finish including the sourcing of land, obtaining planning consents and securing grid connections.

Its mission is to help countries increase their solar energy generation, making more renewable energy possible whilst drastically reducing carbon emissions.

The Background

Island Green Power has a unique mission and business model. This project necessitated a detailed planning phase to understand all the business requirements, to build a comprehensive strategy that would address all the complexities. This process allowed the team to scope a single system solution that addresses all its processes.

Island Green Power wanted a scalable solution that could provide a unified, real-time view of the financials across multiple companies and territories.

The success of this project centred on the collaborative working relationship we developed with Island Green Power, with a collective focus on providing innovative, scalable solutions.

The Solution

Working with Luke Howe (an Account Executive from Oracle NetSuite with extensive experience within the energy and utility sector) we identified Suite Success Financials First Standard Cloud Service with One World as the right solutions to unify systems and introduce leading systematic controls, whilst also providing the desired visibility of financial information across the group.

The Results

The success of this project centred on the collaborative working relationship we developed with Island Green Power and their team, with a collective focus on providing innovative, scalable solutions.

As a result, we were able to deliver the project on time and on budget in under four months, from the briefing phase through to implementation.

What happens next?

Following the UK roll out, Spain and Italy are next on the agenda. Island Green Power is set to expand rapidly, and as the company continues to grow, 3RP will provide support to ensure the solution remains aligned with the evolving needs of the business.

As a managed service customer, Island Green Power will receive dedicated support from our team, ensuring prompt responses to both ad hoc inquiries and routine business questions. Additionally, the team will ensure that Island Green Power can leverage any new features introduced in the semi-annual NetSuite updates.

“Island Green Power’s small but experienced project team ensured that the implementation process was focused and detailed with clear communication and goals. We look forward to a healthy, long-term relationship with Island Green Power as they continue to grow and reach their ambitions.”

Julian Griffiths – Co-Founder & Director, 3RP

Summary

This was a unique and highly rewarding project, largely due to the collaborative working relationship we developed alongside the importance of their mission. From the outset, we were completely immersed in the intricate workings of the business and relished the opportunity to deliver this project.

 Our experience with 3RP has been exemplary. They’ve proven to be highly competent and cooperative, demonstrating a deep understanding of our business requirements. We appreciate the solutions they’ve provided to date, and we eagerly anticipate our continued partnership on upcoming projects as our business expands. 

Columb Harrington – Chief Financial Officer, Island Green Power
